CHAPTER 1

Data Portal Explorer

This package contains tools to extract metadata from CKAN instances which can be used to study data portals as infrastructures from the perspective of social/cultural research.

- Documentation: https://dataportalexplorer.readthedocs.io.

1.1 Credits

This package was created with Cookiecutter and the audreyr/cookiecutter-pypackage project template.
CHAPTER 2

Installation

2.1 Stable release

To install Data Portal Explorer, run this command in your terminal:

```bash
$ pip install data_portal_explorer
```

This is the preferred method to install Data Portal Explorer, as it will always install the most recent stable release. If you don’t have pip installed, this Python installation guide can guide you through the process.

2.2 From sources

The sources for Data Portal Explorer can be downloaded from the Github repo.

You can either clone the public repository:

```bash
$ git clone git://github.com/kingsdigitallab/data_portal_explorer
```

Or download the tarball:

```bash
$ curl -OL https://github.com/kingsdigitallab/data_portal_explorer/tarball/master
```

Once you have a copy of the source, you can install it with:

```bash
$ python setup.py install
```
To use Data Portal Explorer in a project:

```python
import data_portal_explorer
```

To use Data Portal Explorer from the command line:

```
$ data_portal_explorer
Usage: data_portal_explorer [OPTIONS] CONFIG DEST COMMAND1 [ARGS]... [COMMAND2 [ARGS]...]

Console script for data_portal_explorer.

Options:
--format [csv|json] [default: json]
--help Show this message and exit.

Commands:
extensions Gets the available extensions.
packages Gets packages.
resources Extracts metadata from resources from previously downloaded...
taggets Gets the tags used by the datasets.
themes Gets the themes used by the datasets.
```
Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

### 4.1 Types of Contributions

#### 4.1.1 Report Bugs

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

#### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.
4.1.4 Write Documentation

Data Portal Explorer could always use more documentation, whether as part of the official Data Portal Explorer docs, in docstrings, or even on the web in blog posts, articles, and such.

4.1.5 Submit Feedback

The best way to send feedback is to file an issue at https://github.com/kingsdigitallab/data_portal_explorer/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

4.2 Get Started!

Ready to contribute? Here’s how to set up data_portal_explorer for local development.

1. Fork the data_portal_explorer repo on GitHub.

2. Clone your fork locally:

   ```
   $ git clone git@github.com:your_name_here/data_portal_explorer.git
   ```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

   ```
   $ mkvirtualenv data_portal_explorer
   $ cd data_portal_explorer/
   $ python setup.py develop
   ```

4. Create a branch for local development:

   ```
   $ git checkout -b name-of-your-bugfix-or-feature
   ```

   Now you can make your changes locally.

5. When you’re done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

   ```
   $ flake8 data_portal_explorer tests
   $ python setup.py test or py.test
   $ tox
   ```

   To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

   ```
   $ git add .
   $ git commit -m "Your detailed description of your changes."
   $ git push origin name-of-your-bugfix-or-feature
   ```

7. Submit a pull request through the GitHub website.
4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.

2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.

3. The pull request should work for Python 2.7, 3.4, 3.5 and 3.6, and for PyPy. Check https://travis-ci.org/kingsdigitallab/data_portal_explorer/pull_requests and make sure that the tests pass for all supported Python versions.

4.4 Tips

To run a subset of tests:

```
$ python -m unittest tests.test_data_portal_explorer
```

4.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bumpversion patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.
5.1 [0.1.5] - 2020-05-13

5.1.1 Changed

• Adopt Keep a Changelog format for this document.

5.1.2 Security

5.2 [0.1.4] - 2020-01-22

5.2.1 Fixed

• Fix setup.py URL.

[0.1.3] - 2020-01-22 —

5.2.2 Added

• Command line documentation.
5.3 [0.1.1] - 2020-01-22

5.3.1 Fixed

• Syntax in README.

5.4 [0.1.0] - 2020-01-22

• First release on PyPI.
